Press Release
FOR IMMEDIATE RELEASE:

Taurus Software's Analysis Suite brings time saving Metadata enhancements to customers

REDWOOD CITY, CA, May 10, 2007. Taurus Software Inc., the country's foremost provider of productivity solutions for the Ecometry and Amisys vertical markets, today announced the availability of new metadata enhancements for its widely used Analysis Suite application.

Essentially "data about data," metadata will help Ecometry users gain a more thorough understanding of (and thereby capitalize on) the rich storehouse of information found in their data warehouse, Taurus Software's robust Ecomedate data foundation.

Metadata is now an available enhancement to Ecomedate Analysis Suite. These new features will translate all the heavily coded fields, flags and indicators typical of most databases into functional, simple-to-understand names familiar to even the non-technical user.

Thus, metadata will make it much easier for Taurus customers to locate and gather the elements they need for more in-depth analysis and reporting.

"Enterprise data warehouses have to be more complex than ever these days to keep up with demands for advanced functionality, decision making and reporting," says Steve Jackson, Manager of Development at Taurus Software. "And that usually means an exponential increase in oddly abbreviated fields, system codes, et cetera. Making sense out of them can be challenging, even for IT people."

Fortunately, the metadata functionality in the new Analysis Suite solves that problem, assigning plain English-language names to all data elements, transforming alphanumerical codes into meaningful information, and even providing a convenient data dictionary that explains the origins of all data elements.

"Customers who've beta-tested these enhancements say they really build on the inherent power of the Analysis Suite application," Jackson continues. "Now they can quickly drag and drop the data they need and Analysis Suite will create the necessary relationships to complete the analysis. They won't have to keep asking overtaxed IT for favors. We expect to see a lot of smiling faces."

About Taurus Software
Taurus Software (www.taurus.com) has been "making data liquid" since 1985. Taurus' products are the fastest, easiest way to select, extract, manipulate and move data between platforms to synchronize applications, populate data warehouses, build sales data marts, analyze data, support Web servers, or meet any other need.

Taurus is a member of the HP e3000 Transition Partners Program, is an HP Integrity Ready Partner, and also has technology partnerships with Quest Software, Lund Performance Solutions, Managed Business Solutions, Ecometry Alliance, Orbit Software, Pathway Pacific, Amisys Synertec Inc. and Acumium.
